From 20-49 assets:	5,00 €	19,00 €	19,00 €	29,00 €

OUR SERVICES IN DETAIL

Explained step-by-step.

Process consultancy regarding your IT Rollback

In preparation for your IT hardware rollback we provide you with detailed explanations regarding all remarketing processes. We can also assist you with the implementation of a lifecycle process.

Valuation of your used hardware within 48 hours

After you have submitted a list of all IT Hardware you are wishing to sell, you will receive a detailed valuation of your hardware within 48 hours, adjusted to your needs.

Optical and technical inspection

Our employees will inspect every device for optical and technical defects as well as missing parts. A comparison with your inventory numbers is also possible.

Anonymization of your IT Hardware

After receiving inspection, all user data as well as identifying features will be removed from the devices. Identification of the previous location or owner will be impossible.

Environmentally friendly disposal

As a verified disposal firm, we dismantle devices to their base components. The raw materials gained will contribute directly to environmental protection.

Serial number based, extensive reporting

You will receive an extensive reporting based on serial numbers. This report will state the condition and missing parts for each device.

Logistic handling of unpacked IT assets

When buying your used IT hardware, we will provide a fast and seamless collection. The whole process will be planned collaboratively.

Provision of transport container

For a secure transport, we gladly provide suitable transport boxes. The integrated compartments facilitate smooth handling.

Logistic handling for unpacked assets

Should you be unable to securely pack your assets yourself, we will find a solution and provide you with assistance by taking care of packaging and logistics for you.

CDP agreement and IT security documents

Full security guaranteed: bb-net is always up to date regarding the GDPR. You will receive prefabricated documents as required for e.g. data erasure.

Software data erasure including itemized report

We will erase your data fully automated in our high security sector. No human interaction will be necessary. The method of data erasure will be chosen in coordination with you.

Mechanical destruction of data carriers

Data carriers, which can't be erased by software, will be destroyed mechanically according to DIN 66399 BDSG. You will receive proof in the form of photos. This process is free of charge.

Mechanical destruction at your premise

The destruction of data carriers can also be done via mobile data carrier shredder at your premise (including video monitoring). A complete documentation will be ensured.

Fast lane processing according to SLA

Should your company have guidelines regarding the processing time for logistics, arrival, data erasure or auditing, bb-net can offer preferential fast lane processing according to SLA.

Creation of an ecological balance sheet

The balance sheet contains the following information: Type and quantity of the devices, frequency of your deliveries, CO_2- and energy savings.
