IT-REMARKETING

Secure and professional remarketing for your IT-assets

bb-net is your one-stop partner for all your IT-Hardware rollbacks. We work step by step, in order to ensure a smooth, professional and secure rollback of your workplace IT.

1. Preparation

Should you have any questions regarding our remarketing process, we will gladly walk you through our lifecycle process step by step.

2. Evaluation of you IT asset within 48 hours

As soon as you provide us with a list of IT assets you plan to retire, our experts will send you a detailed evaluation of your IT assets in accordance with your needs.

3. Shipping/Logistics

Arrange a day that is convenient for you and we will plan and oversee the collection process. In case you will not be able to handle the preparations yourselves, we would be happy to send you professional assistance.

4. Data erasure software including tamper proof reports

As a certified data destruction specialist, we strive to provide you with reliable and irreversible destruction of your data. For this reason we have partnered with the specialist blanco in order to provide you with an erasure method in accordance with NATO standards.

5. Comprehensive reporting based on serial numbers

You will receive a comprehensive reporting based on the serial numbers of the devices. This reporting will include the full configuration and optical/technical condition of your assets including a description of all damages and missing parts.

6. Further processing

Depending on the condition of the hardware, the devices will be refurbished professionally. In case this should not be feasible, bb-net will recycle the devices in accordance with the law.

YOUR EXPERIENCED PARTNER

Remarketing through bb-net – the save, sustainable solution for your business-IT.

Leading the market since 1995

bb-net is your partner for the professional preparation of your IT hardware for its second lifecycle.

Founded as an online retailer, bb-net quickly became one of the leading IT-refurbisher on the German market, certified by the Microsoft Authorized Refurbisher program.

All processes from the auditing of the devices, data erasure to the refurbishment under production like conditions, all steps are handled by our team of 60 workers in our new headquarter in Schweinfurt, Bavaria.

With its focus on quality and innovative concepts, bb-net was able to grow continuously since 2011. Today we maintain successful partnerships with many international corporations from many different fields such as airlines, heavy industry, telecommunication and public institutions. Additionally, bb-net is cooperating with the biggest retailers, purchasing organizations and distributions on the German market.

Audit, system check and evaluation

Everything under one roof: Since we moved into our new headquarter in 2018, we have the capacity to refurbish more than 120.000 IT assets per year. After the asset is inspected upon arrival, every device will receive a unique identifier coding. Under this coding, all test results from the optical and technical evaluations will be saved and each step of the refurbishment process at bb-net will be retraceable.

Certified data erasure

As stakeholders know, there is more to simply removing old equipment from the premises. The logistics of data security, migration of data and physical removal of assets need to be expertly and responsibly undertaken.

Since 2014 bb-net is certified for data sanitation according with DIN 66399 of the BDSG. All data erasure is done in our high security facility with the software tools of our partner blanco. For particularly sensitive Data, we offer the mechanical destruction of hard disks through perforation.

Refurbishment and Remarketing

Since 2011 the professional refurbishment of IT-Hardware forms the core of our business. Everyday more than 250 devices are refurbished under the highest quality standards. With our quality refurbishment process, we strive to deliver a product, which is easy to use by every user.

Recycling

Unfortunately, some devices are not suited for a second lifecycle. Old, damaged or worn out devices will be disassembled and sorted within our facilities, before they will be returned to the resource cycle.

Your advantages

- Fair prices for your used IT assets
- Reliable handling from a single source from the rollback of your hardware to the refurbishment and recycling process
- Data security, from logistics to certified data erasure including a final report
- Contribution to your companies sustainability and CSR efforts
